## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 2-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilson et al. EP 1025813 A2 in view of Lenker et al. US PN 5,683,451.

Wilson et al. discloses in figures 1-12 a stent delivery system comprising inner (10) and outer (40) shafts, stent bed (24), tip (20), radiopaque marker on inner shaft (22), coupling member and valve relief (60) on outer shaft, handles (5,12,handle proximate to 5, 52,60, or Y-shaped coupling member) coupled to both inner and outer shafts (also see lines 20-30 of col. 11), radiopaque stent stop (22), radiopaque marker (46) on outer shaft, and the stent has segments at a plurality of radial positions. Note that the stent as claimed in claim 14 does not require the segments to be along a common radial axis or line. Wilson et al. lacks the express disclosure of channel spacers disposed between the inner and outer shafts. Lenker et al. teaches in figure 13 and lines 30-40 of column 9 a stent delivery system wherein channel spacers are disposed between the inner and outer shafts in order to provide additional column strength without a corresponding increase in stiffness for assisting implantation.

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the stent delivery device disclosed by Wilson et al. by

Application/Control Number: 09/691,650

Art Unit: 3738

incorporating channel spacers disposed between the inner and outer shafts in order to provide additional column strength without a corresponding increase in stiffness for assisting implantation.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William H. Matthews (Howie) whose telephone number is 703-305-0316. The examiner can normally be reached on Mon-Fri 7:00-4:30 (Every other Friday off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine M. McDermott can be reached on 703-308-2111. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-2708 for regular communications and (703) 305-3590 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0858.
